

With over 20 years of experience, Mindray hosts a wide range of ultrasound imaging solutions including cart-based and portable systems. Being exported to over 190 countries, Mindray ultrasound systems are today being used by medical professionals for general as well as highly dedicated clinical utility. With a global R&D base spanning over Asia, Europe and America, the ultrasound solutions by Mindray are a result of an integral cooperation with the medical community, allowing for the ultrasound systems to be extremely user centric in terms of performance and usability. Mindray is well positioned to become one of the leading ultrasound imaging solutions provider.

mindray

mindray
healthcare within reach

Mindray's DC-60S, incorporating innovative technologies from advanced ultrasound systems, delivers optimal image quality and a wide range of application capabilities all at an affordable cost. In particular, its unique touch gesture feature is designed to help improve workflow and facilitates ease and confidence of use, enabling you to put patient care first. Automation tools including standardized exam protocols and a number of auto-measurement packages, would help you reduce scan time, and increase everyday efficiency. Mindray understands the reality of tight working spaces, so the DC-60S lightweight system has a small footprint for increased portability and maneuverability. In short, DC-60S's capabilities and efficiency make it a practical choice and a good investment for clinicians.

Advanced technology ensures quality exams

Benefiting from a rich line of innovation, the DC-60S incorporates the latest in Mindray's unique technology. Product design focuses on reliable image quality, and also greatly enhances the experience of operating an ultrasound system in daily clinical practice, with the goal of allowing the clinicians to perform quality exams.

High performance, powered by imaging technologies including iClear, iBeam, PSH, Echo Boost, and highly user-centric operation techniques, means the DC-60S is a hard-working machine addressing challenges faced by you while scanning under pressure.

PSH

Phase shift harmonic imaging (PSH), also known as purified harmonic imaging, plays an important role in reducing noise while preserving tissue definition and resolution.

Echo Boost™

As Mindray's new breakthrough image processing* technology, Echo Boost is designed to utilize raw signals to enhance the weak echo signals while suppressing surrounding noise, providing you with a clearer chamber view and improved visualization of the myocardial tissue layers.

Versatile transducers solution

The DC-60S's versatile transducers solution allows you cover extensive exams on one machine, at an attractive price. Mindray's transducer technologies are designed to help deliver exceptional quality of care. The frequency of L14-6NE high-density transducer reaches up to 16MHz, improving the ability to detect detailed tissue information and thereby enhancing the diagnostic confidence of the clinician.

Shared service meets every need

Thanks to the DC-60S's shared service capabilities, reliable image quality for patients of various ages and sizes in diverse clinical areas is now available all with one intelligent ultrasound machine. Covering general imaging, cardiology and OB/GYN, the DC-60S has professional tools such as Auto IMT, iNeedle, TDI and QA, 4D imaging and Smart OB to help complete daily exams easily and precisely.

Auto IMT

The DC-60S's Auto IMT not only detects the thickness but also provides the IMT trend graph, which allows a more accurate assessment of a patient's risk of developing cardiovascular disease.

Auto IMT

iScape™ (Real time panoramic imaging)

The DC-60S's iScape function extends the field of view and gives a better understanding of whole anatomical structures.

TDI and QA with Strain/Strain Rate

The TDI functionality of the DC-60S facilitates quantitative evaluation of regional myocardial movement and global myocardial function, providing complete TDI modes for faster and more direct diagnoses.

Strain Rate Based on TDI

4D Imaging

4D imaging technology delivers a range of tools that help take advantage of the full value of volume data. With rich rendering modes and iPage (multi-slice imaging), more information on fetus structure is made available to make a more confident diagnosis.

Smart OB™

Accurate auto measurements of the most frequently examined parameters including BPD/HC/FL/AC/OFD on a single click.

IVC & Portal Vein

Left Lobe Liver Cyst

Thyroid Adenoma with HR Flow

Dense Breast Tissue with Dilated Ducts

CCA Triplex Auto Trace Measurement

Aortic Regurgitation CW Doppler

4C Fetal Heat with Dual Mode

3D Fetal Face

Get more
done faster

Touch-Screen Gesture

With touch-screen gesture, a brand-new operation experience is at your fingertips, creating a new standard and style for workflow. The clinician can complete most of the operations just with the touch screen. Whether it's swiping to review images, shifting the image to and from the monitor, zooming in/out, measuring or starting user-defined functions with specific hand motions, the DC-60S allows you to get more done, much faster.

Auto Measure

Application-specific auto-measurement packages include Auto IMT, Auto LV, auto PW trace & calculation, Smart OB and Smart NT, all reducing repetitive button pushes and steps, thus streamlining workflow.

Raw Data

Clinicians now have the freedom to perform image adjustments, measurements and other functions after the exam is completed.

Connectivity

DC-60S provides robust DICOM connectivity and is compatible with many imaging IT solutions, giving more flexibility. This connectivity allows you to save images to various devices, like PACS, USB, PC and smart devices.

Gel warmer

Rotatable and height adjustable control panel

Easy & fast USB 3.0

17" LED monitor with 180° rotatable angle

10.4" gesture sensitive touch screen with adjustable angle

Dedicated endocavity transducer holder

Detachable transducer holders

Cable hook

4 active transducer sockets

Foot rest
